SUMMARY

AI Engineering student specializing in Machine Learning and backend systems. Experienced in building end-to-end AI products including data pipelines, model training, REST APIs, and deployment. Strong foundation in data structures, algorithms, and applied machine learning. Seeking software/AI internship roles focused on real-world problem solving and scalable systems.

SKILLS

- Languages: Python, Java, C, C++
- CS: Data Structures, Algorithms, OOP, OS, DBMS
- ML: Scikit-learn, Pandas, NumPy
- Backend: Flask, FastAPI, Docker
- Web Development: HTML, CSS, React(Basic)
- Database: MySQL, MongoDB (Basic)
- Tools: Git, GitHub, VS Code, HuggingFace

PROJECTS

Website Threat Detection System and Extension using ML

- Developed a phishing and malicious URL detection system using Random Forest and Logistic Regression trained on 6,15,000+ URLs. Achieved 94% classification accuracy. Built REST API using Flask and browser extension for real-time detection.
LINK: <https://github.com/deepspsd/webshield.official>

Movie Recommendation System using ML Models

- Created a movie recommendation system using TF-IDF and cosine similarity on more than five thousand titles, with a smooth Flask interface delivering quick results under two hundred milliseconds.
LINK: <https://github.com/deepspsd/Movie-Recomendation-System>

AI-Powered Startup Development Platform

- Built an AI platform that generates business ideas, validates them, and produces MVP plans and pitch decks using LLM APIs solving each and every entrepreneur's "WILL IT CLICK?" problem. Designed multi agent workflow and REST backend using FastAPI. Implemented prompt pipelines, response caching, and modular service architecture.

EDUCATION

BE In CSE- ARTIFICIAL INTELLIGENCE

Jul 2023 - Aug 2027

Sri Venkateshwara College Of Engineering, Bengaluru, India

ADDITIONAL INFORMATION

- **Languages:** English, Hindi, Kannada, Tamil (basic), Telugu(basic)
Interested in building eco-friendly tech solutions that combine innovation with sustainability
